TEX is a programming language for the typesetting of documents. It was created by Donald Erwin Knuth in the late 1970s and it is documented in *The TEXbook* [1].
In the early 1980s, Leslie Lamport created the initial version of LATEX, a high-level language on top of TEX, which is documented in *LATEX: A Document Preparation System* [2]. There exists a healthy ecosystem of packages that extend the base functionality of LATEX; *The LATEX Companion* [3] acts as a guide through the ecosystem.
In 2003, Till Tantau created the initial version of Beamer, a LATEX package for the creation of presentations. Beamer is documented in the *User's Guide to the Beamer Class* [4].
